ISSUE No.1 DATED 1.4.58.

AMENDMENT No. 1 DATED 1.3.59.

Page 1 Dimensions

Amend the dimensions for "A" Seated Height and "D" Overall Length to read as follows:-

<u>DIMENSIONS (mm)</u>	<u>MIN.</u>	<u>MAX</u>
"A" Seated Height	57.2	66.7
"D" Overall Length	-	73.8

TESTS

To be performed in addition to K.1001.

<p>All tests are to be performed in the specified order with the valves mounted in total darkness and except where otherwise stated in an ambient temperature of $25^{\circ} \pm 5^{\circ}\text{C}$.</p> <p>The tests specified in clauses "b" to "g" inclusive are to be performed at least 28 days after Test "a".</p>

NOTES

- The valves shall have been in the ageing rack immediately prior to Test 'b'. They shall be quickly transferred to the test position. Time taken to strike shall be less than 0.5 secs.
- The values of operating voltage are to be recorded.
- An increase in voltage between the value obtained in Test 'b' and that recorded in Test 'a' within the following limits is permissible:-

Valve Type	Allowable increase in Test 'b' from Test 'a'
CV.2456, CV.2457	10 volts.
CV.2458, CV.2459, CV.2460, CV.2461, CV.2462.	5 volts.

Should the value of operating voltage recorded in Test 'b' be higher than that specified above, the valves are to be held for a further minimum period of 28 days when if the upward drift is still evident the valve shall be rejected.

- To be performed in an approved circuit.
- Tests to be completed within 30 secs.
- On completion of Test 'f' the valves shall be run for the seven hour stability test. The conditions of Note 1 shall apply.
