

CV4106

Specification MOA/CV.4106		SECURITY	
Issue No.1.	Dated 1.12.60.	Specification	Valve
To be read in conjunction with K1001, BS448 and BS1409		Unclassified	Unclassified

TYPE OF VALVE:-	Reliable Pulse Tetrode		MARKING
CATHODE:-	Indirectly Heated		See K1001/4
ENVELOPE:-	Glass (parallel sided)		
PROTOTYPE:-	VX3524(similar to CV2659 (5D21A))		BASE BS448/BS-0

<u>RATINGS</u> (All limiting values are absolute)			<u>NOTES</u>	<u>CONNECTIONS</u>
Heater Voltage	(V)	6.3	B	PIN      ELECTRODE
Heater Current	(A)	1.3	B	1      Heater Centre Tap HGT
Heater Voltage	(V)	12.6	C	2      Heater H
Heater Current	(A)	0.65	C	3      Internal Conn. IC
Max. Anode Voltage (D.C.)	(kV)	4.0	D,E	4      Screen Grid g2
Max. Anode Voltage (Pulse)	(kV)	5.0		5      Internal Conn. IC
Max. Anode Dissipation	(W)	15		6      Control Grid g1
Max. Screen Voltage (D.C.)	(V)	850	E	7      Heater H
Max. Screen Dissipation	(W)	3.5		8      Cathode and base k shell (Note A)
Max. Grid Voltage (positive and negative)	(V)	220		TC      Anode a
Max. Grid Dissipation	(W)	0.5		
Max. Cathode Current (D.C.)	(mA)	150		
Max. Cathode Current (pulse)	(A)	10		
Max. Anode Current (Pulse)	(A)	7.5		
Max. Peak Heater Cathode Voltage	(V)	150		
Max. Pulse Length	(usecs)	10	F	<u>DIMENSIONS</u>
Min. Heating Time	(secs)	45		See K1001/A1/D1
Max. Bulb Temperature	(°C)	24.0	G	Dimensions mm. Min. Max.
Inner Amplification Factor ( $\mu$ gl/g2)		9.5		"A" Overall length - 100
Max. Shock (Short duration)	(g)	500		"B" Diameter - 34
Max. Acceleration (Continuous)	(g)	2.5		"L" Seated height - 85
<u>CAPACITANCES (pF)</u> <u>NOTE H</u>				<u>TOP CAP</u> BS448/CTL.
C in (nom)		14.5		
C out (nom)		12.0		
Cag 1.(max)		1.55		
				<u>MOUNTING</u>
				Any

NOTES

- A. WARNING If a base retaining device is used, the clamp must be insulated when the potential is other than earth.
- B. Heaters parallel connected.
- C. Heaters series connected.
- D. With maximum screen voltage of 400 V and when no transients are present (essentially resistive anode load) maximum D.C. anode voltage of 4.5kV D.C. may be applied.

NOTES (Cont'd)

- E. A series resistance must be inserted in the power supply to limit the D.C. short circuit current to less than 0.5A.
- F. Total pulse length in any 240usec., period shall not exceed 12usecs., under less onerous conditions, however, this limitation may be exceeded.
- G. Temperature over the top 15 m.m. of the bulb to be limited to 150° C.
- H. Measured on a 1 Mc/s bridge in fully screened holder. No shield, all I.C. connections left floating.
- I. The Joint Services Catalogue Number is 5960-99-037-2303.

NOTES

1. Valve to be driven with 2 μsec. pulses at p.r.f. 500 c/s so that the grid voltage rises to 150V positive (max.).

2. Valve to be driven with 2 μsec. pulses at p.r.f. 500 c/s so that the grid voltage rises to 50V positive (max.).

3. Valve shall be given a minimum pre-heat time of 60 secs. with heater volts only. Initial arcing may be tolerated but the valve shall be free from arcing after a period of 1 minute after the H.T. has been applied.

4. VA(b) 250V                    R<sub>g1</sub> 10KΩ                    C<sub>g2</sub> 2 μF  
V<sub>g2</sub> 150V                    R<sub>X</sub> 900Ω                    C<sub>a</sub> 0.5μF  
R<sub>L</sub> 2KΩ                    C<sub>k</sub> 50μF                    g 2.5

5. T<sub>p</sub> 2usecs. p.r.f. 50 c/s.

6. The capacitance connections shall be:

Test	H.P.	L.P.	E.
C <sub>g1l</sub>	T.C.	6	1,2, ,4,7,8,C.
C <sub>in</sub>	6	1,2,4,7,8,	T.C., C.
C <sub>out</sub>	T.C.	1,2,4,7,8,	6, C.

7. Valves to be vibrated in each of the three required planes for not less than 30 hours, and not less than 100 hours, total. Heaters switched, one minute on, three minutes off. No other voltages applied. Minimum peak acceleration 5g. Frequency 170 c/s.

8. Test conditions for vibration noise in Group C. shall apply.
