

AMPEREX TUBE TYPE 6759

6759

TENTATIVE DATA

The 6759 is a three electrode, forced air-cooled tube designed with special characteristics as a low impedance, RF industrial oscillator to deliver maximum power under varying load conditions.

The filament is thoriated tungsten. The anode is capable of dissipating 6 KW. Maximum ratings apply up to 30 mc.

The 6759 has a heavy wall, high dissipation and heat storage copper anode and an extremely rigid, coaxial grid structure.

Filament connections are made with heavy, heat dissipating, permanently attached, flexible leads eliminating difficulties due to contact resistance at the terminals.

The tube design also incorporates wide spacings between the elements which, together with the rugged mechanical supports, prevent internal shorting.
